

Peer Review

EXAMPLE:

| Percentage given | | to A | to B | to C | to D | to E |
|--|------|-------|--------|-------|-------|-------|
| | by A | (*) | 100 | 65 | 100 | 55 |
| | by B | 85 | (*) | 55 | 80 | 70 |
| | by C | 75 | 100 | (*) | 60 | 80 |
| | by D | 80 | 100 | 60 | (*) | 75 |
| | by E | 80 | 100 | 60 | 80 | (*) |
| Individual Average | | 80 | 100 | 60 | 80 | 70 |
| Grand Average = $(80 + 100 + 60 + 80 + 70)/5=78$ | | | | | | |
| Individual Av./Grand Avg WEIGHTS | | 80/78 | 100/78 | 60/78 | 80/78 | 70/78 |
| | | 1,03 | 1,28 | 0,77 | 1,03 | 0,9 |

So, if the mark was 25, then:

| | |
|--------------------------------|---------|
| A would get $(1,03 \times 25)$ | = 25,75 |
| B would get $(1,28 \times 25)$ | = 32 |
| C would get $(0,77 \times 25)$ | = 19,25 |
| D would get $(1,03 \times 25)$ | = 25,75 |
| E would get $(0,90 \times 25)$ | = 22,50 |
